

# LDI Monitor - September 2018

## Canadian Discount Curves as of 2018-09-28 \*

## Historical Interest Rates in Canada

## Monthly LDI Highlights

During the month of September, interest rates increased driving liabilities down. Spreads on provincial bonds (15 yr+) decreased by around 1.3 bps while spreads on long-term corporate bonds increased by around 2.7 bps over the month. Sample Canadian pension plan asset portfolios had negative returns (-0.68% to -0.81%) for the month. The sample accounting liability returns were negative over the month (from -1.1% to -2.1%) while the solvency liability returns were between -0.5% and -0.9% depending on the Plan's maturity.

## Assumptions & Sources

(\*) All discount curves shown are expressed as continuously compounded annual spot interest rates.

(\*\*) Rates are based on the CIA methodology. The annuity purchase rate and the CIA prescribed spread are based on medium duration, liabilities as defined in the most recent CIA solvency valuation guidelines.

(\*\*\*) The target duration of the accrued liabilities for the young, steady and mature pension plans are fixed to 17, 14 and 11 years respectively. Solvency, accounting and economic liabilities are assumed to discount expected nominal liability cash flows. All surplus return calculations assume a fully funded status at the beginning of the year. Asset allocation in equities is assumed to be evenly allocated amongst the S&P/TSX, S&P500 unhedged in CAD and MSCI-EAFE unhedged in CAD. Bank of America Merrill Lynch Canadian Broad Bond Market Index (CANO) is used as the benchmark for fixed income. Sources: Fiera Capital, Bank of Canada, Bank of America Merrill Lynch, Bloomberg, MSCI-Barra, S&P and the Canadian Institute of Actuaries.
