

# Sustainability-related Disclosures

## Fiera Atlas Global Companies Fund

28/12/2022 - V1.0

# Sustainability-related Disclosures

## Summary

These disclosures are made in accordance with Article 10 of Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector ("**SFDR**") and Articles 23 to 36 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022 supplementing Regulation (EU) 2019/2088 of the European Parliament and of the Council. The disclosures are made by Fiera Capital (UK) Limited ("**Investment Manager**") on behalf of the following fund ("**Fund**"):

**Magna Umbrella Fund Plc – Fiera Atlas Global Companies Fund**  
**LEI: 213800XIR1RYI25IIO67**

## No Sustainable Investment Objective

The Fund promotes environmental characteristics, but does not have as its objective sustainable investment.

## Environmental or Social Characteristics of the Financial Product

The Fund promotes climate change mitigation. In particular, it supports the goal of achieving net zero greenhouse gas emissions by 2050 or sooner, in line with global efforts to limit global temperature rise to 1.5°C.

## Investment Strategy

The investment objective, policy and strategy of the Fund is detailed in the Supplement of the prospectus applicable to this Fund.

### Investment strategy used to meet the environmental or social characteristics promoted by the Fund

The Investment Manager will ensure that the weighted average carbon intensity ("**WACI**") of the Fund remains consistently below the WACI of the MSCI All-Country World Index. In addition, the Fund will be managed to ensure that by 2030 its WACI will be at least 55% below the 2019 WACI of the MSCI All-Country World Index (together, the "**Carbon Threshold**"). The Investment Manager assesses the WACI of the Fund as recommended by the Task Force on Climate-related Financial Disclosures ("**TCFD**"). This metric calculates the average carbon intensity of a portfolio, expressed in tons of CO<sub>2</sub> equivalent emissions by millions of revenues, weighted by the relative size of the investments in the portfolio. To ensure this strategy is achieved on an ongoing basis, the Investment Manager considers the portfolio's weighted average carbon intensity compared to that of the MSCI All-Country World Index, primarily using data sourced from third-party data providers, and takes any necessary

action to ensure that the Carbon Threshold is achieved. As further detailed in the prospectus supplement, the Investment Manager measures the Fund against the MSCI All-Country World Index for performance monitoring purposes.

When assessing whether a particular investment is aligned with the environmental characteristic of climate change mitigation, the Investment Manager's primary consideration is whether such investment is aligned with the financial product meeting its binding Carbon Threshold requirement as set out above. Such Carbon Threshold requirement applies to the portfolio as a whole and is therefore applicable (in aggregate) to all of the investments of the Fund. In addition, when assessing whether a particular investment is aligned with the environmental characteristic of climate change mitigation, the Investment Manager may consider whether the investee company:

- > has a carbon intensity that is less than the weighted average carbon intensity ("WACI") of the MSCI All-Country World Index;
- > has set formal emissions reduction targets to achieve the goal of net-zero greenhouse gas emissions by 2050 or sooner (including whether these targets have been established in accordance with methodologies approved by the Science Based Targets initiative ("SBTi")); and/or
- > has in place formal policies and/or material initiatives that are intended to reduce their emissions of greenhouse gases, including efforts to improve energy efficiency and/or policies to derive energy from cleaner fuel sources.

To the extent that an investee company satisfies one or more of the above factors (together, the "**Additional Factors**"), such investment may be considered by the Investment Manager to be aligned with the environmental characteristic promoted by the financial product.

Further, in selecting companies for potential investment by the Fund the Investment Manager considers and applies the following ESG exclusions and limitations:

- > **Coal.** The Fund excludes investments in companies that derive 5% or more of their revenues from the mining of any type of coal (thermal coal or metallurgical). Power generation companies and other companies that generate the majority of their own power from coal and which do not have a committed plan to transition to more sustainable sources of power generation, will be fully excluded.
- > **United Nations Global Compact.** Companies which violate one or more of the United Nations Global Compact principles are generally excluded from the investments of the Fund, unless the Investment Manager determines that either positive engagement with the implicated company can correct the issue, or that there are other positive environmental or social reasons which justify an investment. Companies which are at risk of non-compliance are closely monitored, or otherwise excluded. The United Nations Global Compact ([www.unglobalcompact.org](http://www.unglobalcompact.org)) is a globally recognized common framework that applies to all industrial sectors. This initiative is based on international conventions in the areas of human rights, labour standards, the environment and the fight against corruption. Similarly, any identification of possible 'controversies' by a company (being an instance or ongoing situation in which a company

may allegedly have a negative environmental, social or governance impact) are considered and further investigated and the Investment Manager will either engage with the implicated companies or divest from companies if no reasonable efforts are made to correct the issue.

- > **Tobacco.** Tobacco producers (being those companies that derive at least 15% of their revenue from the production of tobacco) will be ineligible for investment by the Fund. Distributors of tobacco (being those companies that derive at least 20% of their revenue from the distribution or sale of tobacco) will also be ineligible for investment by the Fund.
- > **Controversial weapons.** A company will be deemed ineligible for investment if it derives any of its revenue directly from the manufacture or sale of controversial weapons. Controversial weapons are those that are either prohibited under international conventions or are deemed particularly controversial because of their humanitarian impact. They include weapons of mass destruction such as nuclear, chemical and biological weapons, and weapons that fail to discriminate between civilians or combatants or cause disproportionate harm, such as cluster munitions or anti-personnel mines.
- > **Oil sands.** The Fund will not invest in companies that are directly involved in oil sands extraction.

#### Policy to assess good governance practices of the investee companies

The good governance practices of investee companies are assessed prior to making an investment and continually assessed during the investment holding period. A governance scorecard is used to identify and anticipate risks of poor governance practices; each investee company is given a rating on several corporate matters such as sound management structure, board alignment, shareholder value, ownership structure, tax transparency, and financial and accounting quality.

## Proportion of Investments

Whilst the Investment Manager does not pre-determine its asset allocation, it expects that at least 50% of investee companies will at all times satisfy at least one Additional Factor (as described within the section "Investment Strategy" above).

The Fund is expected to have direct exposure to investee companies through holding shares issued by the companies. While the Fund may use financial derivative instruments such as options and forward currency exchange contracts to hedge currency exposure in respect of hedged classes, they are not currently used to attain the environmental characteristics promoted by the Fund.

## Monitoring of Environmental or Social Characteristics

The Investment Manager's investment personnel responsible for the discretionary management of the Fund's portfolio has the primary responsibility for monitoring the environmental characteristics promoted by the Fund, using the data and systems available to and/or obtained by the investment team. The investment team may be assisted in its monitoring efforts by the Investment Manager's sustainable investment team.

To ensure that the Carbon Threshold (as described within the section “Investment Strategy” above) is achieved on an ongoing basis, the Investment Manager considers the portfolio’s weighted average carbon intensity compared to that of the MSCI All-Country World Index, primarily using data sourced from third-party data providers, and takes any necessary action to ensure that the Carbon Threshold is achieved.

ESG exclusions and limitations are monitored with pre-trade restrictions and, separately, by the Investment Manager’s investment team.

## Methodologies for Environmental or Social Characteristics

The Investment Manager uses the following sustainability indicators to measure the attainment to the environmental characteristic it promotes:

- > The portfolio’s aggregate greenhouse gas emissions,
- > The portfolio’s weighted average carbon intensity; and
- > The portfolio’s exposure to companies active in the fossil fuel sector.

## Data Sources and Processing

The Investment Manager relies upon a combination of third-party ESG information and/or information provided or published directly by the investee company. Third-party ESG information are used to enhance the Investment Manager’s understanding of a company’s ESG profile and practices and include risk ratings and sustainability frameworks (such as the SASB Standards and Integrated Reporting Framework).

Due to the fact that the Fund primarily invests in global publicly listed equities, holdings are generally well-covered by third-party data and research providers. However, there are limitations within the data and, as a result, holdings may be incorrectly assessed. Where identified, the Investment Manager will seek to mitigate this risk through its own assessment, including through company engagement.

Potential ESG risks and opportunities are identified by the Investment Manager, which produces ESG dashboards across a broad range of ESG factors that assist its investment team in reviewing and comparing a range of ESG data points and ESG qualitative disclosures.

The Investment Manager relies upon third-party data providers who use a variety of models to generate estimates and proxies where carbon emissions reporting from companies is missing or unreliable. The proportion of estimated data varies depending upon the data points reviewed.

## Limitations to Methodologies and Data

The effectiveness of the Investment Manager's research process depends largely upon the experience and skill of its investment team and sustainable investment team as well as the quality of data and information available to the relevant teams. ESG information from third-party data providers may be incomplete, inaccurate or unavailable. There is currently a lack of legally binding definition and comparability among providers of ESG ratings or legal requirements to ensure transparency of underlying methodologies of such ratings. As a result, there is a risk that the Investment Manager may incorrectly assess a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the portfolio of a financial product ("**ESG Data Risk**"). Where identified, the Investment Manager will mitigate this risk through its own assessments.

## Due Diligence

The Investment Manager's investment team is responsible for conducting initial and ongoing due diligence on the Fund's holdings. The investment team's analysis is based upon data and information obtained from third-party data providers, data and research tools developed by the investment team and/or company engagement. The investment team may be assisted in its due diligence process by the Investment Manager's sustainable investment team.

## Engagement Policies

Fiera Capital is committed to engage in a constructive and collaborative way with prospective and existing investee companies. The scope of engagement typically spans both financial and ESG factors.

When meeting with companies, the relevant investment team is expected to seek to address material ESG issues both on a proactive basis, to raise awareness of potential issues and on a reactive basis, to revisit past issues and assess how the investee company has addressed them. The Investment Manager allows its investment teams to implement the engagement practices they deem most appropriate for their investment style, and to select the engagement topics they deem most material to the investment in question.

Fiera Capital has a long track record of active dialogue with companies in which the firm invest on behalf of its clients and looks to work proactively toward constant improvement on matters related to ESG and overall performance. Fiera Capital seeks to encourage companies to recognize the importance of ESG factors and supports their efforts to improve the transparency and disclosure of their approach and performance as they relate to material ESG issues

## Designated Reference Benchmark

No index has been designated for the purpose of attaining the environmental characteristics promoted by the Fund.
